

COMPANY PROFILE

Zhuzhou Huarui Precision Cutting Tools Co.,Ltd. is a high and new tech enterprise engaged in the production of cemented carbide cutting tools for CNC machinery, the municipal supporting institution of Zhuzhou Carbide Precision Cutting tool Engineering Technology Research Center. Also the production line has been named key project of "Manufacture makes Hunan stronger". In the market, its "Hardstone" Brand products with excellent properties have been widely used in industries of automobiles, aviation & aerospace, rail traffic, heavy equipment, mold manufacture, power equipment, etc. and have been accepted by customers. Therefore they are selling to various overseas markets.

With its good development prospects, the company has won great favor from various investors. The well-known domestic equity investment funds invested a large sum of money for company in 2011, 2015 and 2017, which has speed-ed up the introduction of high-tech manufacturing equipments and quality test instruments. Therefore, the product quality has climbed one storey higher & reached the first- class in Asia.

The company has in its possession a strong technical strength & has forged a top domestic specialized & high-level R & D team of old, middle-aged & young professional personnel. They included experts enjoying special allowance of the state council & introduced outstanding CNC talents. The company has its own R&D Center consisting of material research, products design, mould design & manufacture, cutting experiments & technical application service, etc. ensuring the provision to customers of the best solutions to products & technical service. At present, the company has 22 nationally authorized patents.

The company has its quality control system covering the whole processes with independent intellectual property rights to guarantee the stability and consistency of its products. The company was awarded ISO9001:2000 quality management system certificate, and passed ISO9001:2015 quality standard system certificate in 2014.

The company has experienced sales engineers and technical application engineers, and has set up its product and technical service branched in China's major industrial cities to provide the most professional and efficient service.

HONOR

EQUIPMENT

The company has a full set of high-level producing equipment ranging from raw power material preparation, mould manufacture, pressing, pressure sintering, grinding to post processing. We use spray drying tower in mixing process. Its advanced technique ascertains the best performance behavior of material in physical property and formability.

Using powder compacting press with Electro-Servo Motor Direct Drive, the most advanced machine for press shaping in the world, which meet the high requirements on precision, performance and stability. For sintering, we equipped the most advanced devices to meet the quality requirements on chemical and physical performance.

For grinding and machining, we equipped Fully auto CNC periphery insert grinder, CNC two-wheel flat lapping machine etc. to ensure product shape and precision demand. We also use the most advanced PVD/CVD coating machines. The state-of-the-art sub-sequence process devices equipped for better performance.

The Explanation Of Chip-breaker

● Negative Inserts

Chip-breaker	Shape and features	Using for	Precision	Recommended Parameters
MT 	Double-sided chipbreaker,it is suitable for steel machining and has wide application. 	Steel machining	M	ap: 1.00~ 5.00 fn: 0.20~ 0.5
M 	It is suitable for steel machining and has wide application. 	Steel machining	M	ap: 1.00~ 4.00 fn: 0.20~ 0.5
GF 	It is suitable for Steel finish machining. 	Steel machining	M	ap: 0.15~2.00 fn: 0.08~0.18
GT 	It is universal chipbreaker,used for semi-finishing and roughing,the nose and cutting edge sharp and strong. 	Steel machining	M	ap:1.00~5.0 fn:0.20~0.50
BF 	For finishing of M-type materialdouble-sided chipbreaker, it has sharp edges, which can effectively cut off stainless steel and solve the problem of surface hardening, etc 	Stainless steel machining	M	ap: 0.15~2.00 fn: 0.08~0.18
BM 	For semi-finishing of M-type material,double-sided chipbreaker, it is suitable for stainless steel machining and has wide application. " 	Stainless steel machining	M	ap: 0.50~8.50 fn: 0.10~0.55
BR 	For rough finishing of M-type material double-sided chipbreaker, the chipbreaker has been optimized, it has wide application for light load rough machining of stainless steel. 	Stainless steel machining	M	ap: 1.50~11.00 fn: 0.15~1.00

Chip-breaker	Shape and features	Using for	Precision	Recommended Parameters
Universal 	Recommended chipbreaker type for general machining it is suitable for K-type material. 	Cast iron machining	M	ap: 0.20~8.00 fn: 0.15~0.60
Non 	For cast iron machining the cutting edge is very strong ,it is the first choice for cast iron machining 	Cast iron machining	M	ap: 0.20~12.00 fn: 0.10~1.20

● Positive Inserts With Hole

Chip-breaker	Shape and features	Using for	Precision	Recommended Parameters
MP 	For stainless steel The hole processing has better comprehensive performance and strong versatility. 	Stainless steel machining	M	ap: 0.10~ 3.6 fn: 0.03~ 0.4
AK 	Recommended chipbreaker for machining of Al alloy large rake angle and sharpening cutting edge, it can achieve easy and fast cutting. Due to surface polishing treatment, It has good resistance to adhesive performance. " 	Aluminium machining	G	ap: 0.10~ 8.00 fn: 0.10~ 0.50

The Instruction Of Grade

Grade	Coating Strucuture					Application	ISO	Wear Resistance  Toughness									
	Coating Way	Coating Color	Pictures	Component	Range			01	05	10	15	20	25	30	35	40	45
WS8115	CVD	Double Color black-yellow		TiN+MT -TiCN+Al2O3 +TiN	Thick	It is suitable for the stable turning environment and the pursuit of high wear resistance; processing general steel, when the cooling is better, the Vc can reach more than 350m/min.	P10~P20										
WS8125	CVD	Double Color black-yellow		TiN+MT -TiCN+Al2O3 +TiN	Thick	It is firstly grade for general steel turning, from finishing to rough machining, it has strong comprehensive performance from low speed to high speed, and also can be competent for general interrupted turning.	P15~P30										
WS8123	CVD	gold-yellow		TiN+MT -TiCN+Al2O3 +TiN	Thick-	It is suitable for the high speed of parting and grooving turning.	P15~P30										
WS6105	CVD	Black		TiN+MT -TiCN+Al2O3	Thick	It is the most abrasion resistant material grades for turning of Gray iron and Cast iron ; it also can be used for high hardness and high wear resistant steel pieces of dry cutting.	K05~K10										
WS6115	CVD	Black		TiN+MT -TiCN+Al2O3	Thick+	It is the firstly grade for turning of Gray iron and Cast iron, good comprehensive performance, it is also suitable for general intermittent processing. it can be used for lower speed roughing of quenched steel and high strength steel.	K10~K20										
WS5125	PVD	Grey Black		AlTiN	Thin	It is special grade for threading turning which used for steel, stainless steel, cast iron and other materials.	P10~P25 M10~M25 K10~K25										
WS7125	PVD	Grey Black		AlTiN	Thin	It is the firstly grade of stainless steel parting and grooving inserts.It meets the middle and low speed cutting and cutting requirements of steel and cast iron.	P15~P30 M15~M30 K15~K30										
WSK10	Un-Coated	Silver gray				It is suitable for the vehicle and milling of nonferrous metal materials, graphite and cast iron , aluminum, copper and other materials. It can also be used for low speed turning of titanium alloy and high temperature alloy.	K05~K10

● Negative inserts

A

● Positive Inserts

● Aluminium Inserts

Features of turning inserts machining steel

- ♦ Specific groove design can effectively control chip flow direction, which makes the cutting process brisk and improve the inserts' service life.
- ♦ Small cutting force efficiently reducing the cutting vibration, obtain high quality finished surface.
- ♦ Optimize the combination of substrate and coating, contribute to more stable and reducing the accidental failure of the inserts caused by the peeling of the coating in the machining process.
- ♦ Optimized design of the roughing cutting edge to balance the safety and sharpness, improve the tool performance.

Features of chip-breaker

MT

- ♦ +6° front angle with the rake face, form a large arc smooth transition design, smooth cutting and versatility.

M

- ♦ Light cutting semi-finishing for light cutting with stable processing for medium and low speed applications with poor rigidity.
- ♦ Improved cutting edge safety and reliability in intermittent and rough machining.
- ♦ Good chip evacuation performance and versatility.

GF

- ♦ Used for finishing and semi-finishing;
- ♦ Large positive rake angle for smaller cutting resistance;
- ♦ Positive cutting edge inclination design effectively controls the flow of chips, good chip evacuation achieved;
- ♦ Coating post-treatment technology improves the wear resistance and makes the surface more gloss.

GT

- ♦ Used for semi-finishing and roughing;
- ♦ The nose and cutting edge sharp and strong;
- ♦ Variable rake angle design combined with spherical chipbreaker, suitable for a wider processing range;
- ♦ Good chip evacuation performance and versatility.

Application Case

Automobile Hub unit continuous turning in high speed

A1

	Workpiece	Automobile Hub unit steel 65Mn
	Machining way	Wet continuous/ intermittent semi-finish external turning
	Inserts	WNMG080408-GF WS8115
	Machining parameter	Vc=330m/min , f=0.3mm/r , ap=0.8mm
	Result of cutting	Hardstone : 23~30pcs/cutting edge Brand T:13-21pcs/cutting edge

Automobile Hub unit continuous turning in intermediate speed

	Workpiece	Automobile Hub unit steel 65Mn
	Machining way	Wet continuous/ intermittent semi-finish external turning
	Inserts	WNMG080408-GF WS8125
	Machining parameter	Vc=190m/min , f=0.2mm/r , ap=0.5~0.6mm
	Result of cutting	Hardstone : 63~87pcs/cutting edge Brand T:40-65pcs/cutting edge

Cage steel continuous turning

	Workpiece	Cage steel 55#
	Machining way	Cage steel continuous semi-finishing and finishing external turning
	Inserts	TNMG160408-GF WS8115
	Machining parameter	Vc=320m/min , f=0.24~0.27mm/r , ap=0.5~1.5mm
	Result of cutting	Hardstone : 130pcs/cutting edge Brand T:120pcs/cutting edge

Hinge pin external and taper roughing turning

A1

Workpiece	42CrMo tempering to HRC38
Machining way	Continuous turning with emulsion for facing A and external turning
Inserts	WNMG080408-GF WS8115/WS8125
Machining parameter	Vc=125m/min , f=0.25mm/r , ap=1.0~2.5mm
Result of cutting	Hardstone : 134+pcs/cutting edge Brand L:76pcs/cutting edge

Hardstone' s GF chipbreaker better than previous chipbreaker which imported from other country,the results show that the life and stqability has increased.

End facing of hinge pin roughing turning

	Workpiece	42CrMo tempering to HRC38
	Machining way	Turning with emulsion for facing turning
	Inserts	WNMG080408-GT WS8115
	Machining parameter	Vc=175m/min , f=0.2~0.25mm/r , ap=1.5~1.8mm
	Result of cutting	Hardstone : 152+pcs/cutting edge Brand O:70pcs/cutting edge

Bearing pedestal intermittent turning

	Workpiece	Automobile Hub bearing pedestal steel 65Mn
	Machining way	Wet continuous/ intermittent semi-finishing external turning
	Inserts	WNMG080408-GT WS8125
	Machining parameter	Vc=230m/min , f=0.22mm/r , ap=0.8mm
	Result of cutting	Hardstone : 55~65pcs/cutting edge Brand T:50~60pcs/cutting edge

Bearing pedestal intermittent turning

	Workpiece	Automobile Hub bearing pedestal steel 55#
	Machining way	Wet continuous/ intermittent semi-finishing and finishing external turning
	Inserts	WNMG080408-GT WS8125
	Machining parameter	Vc=259m/min , f=0.18~0.275mm/r , ap=0.5~1mm
	Result of cutting	Hardstone : 78pcs/cutting edge Brand D:40~50pcs/cutting edge

End facing of housing continuous roughing turning

	Workpiece	steel 55#
	Machining way	Wet intermittent turning
	Inserts	WNMG080408-GT WS8125
	Machining parameter	Vc=209m/min , f=0.25mm/r , ap=1.8mm
	Result of cutting	Hardstone : 100~130pcs/cutting edge Brand T:110~140pcs/cutting edge

Automobile Hub unit intermittent / continuous turning

	Workpiece	Automobile Hub unit steel 55#
	Machining way	Wet continuous/ intermittent semi-finish external turning
	Inserts	WNMG080408-MT WS8125
	Machining parameter	Vc=220~300m/min , f=0.15~0.28mm/r , ap=0.8mm
	Result of cutting	Hardstone : 80~100pcs/cutting edge Brand T:70~90pcs/cutting edge

Flange intermittent / continuous turning in high speed

	Workpiece	Flange steel 55#
	Machining way	Wet journal shaft continuous/ intermittent finishing turning
	Inserts	VNMG160408-MT WS8115
	Machining parameter	Vc=230~510m/min , f=0.167mm/r , ap=0.45mm
	Result of cutting	Hardstone : 20~21pcs/cutting edge Brand T:15~16pcs/cutting edge

Automobile Hub unit hole intermittent / continuous turning

	Workpiece	Automobile Hub unit steel 65Mn
	Machining way	Wet intermittent semi-finishing turning
	Inserts	VNMG160408-MT WS8115
	Machining parameter	Vc=300m/min , f=0.24mm/r , ap=0.5mm
	Result of cutting	Hardstone : 160~180pcs/cutting edge Brand T:160~180pcs/cutting edge

Housing intermittent roughing turning

A1

	Workpiece	Steel Cf53
	Machining way	Wet journal shaft intermittent finishing turning
	Inserts	CNMG120408-MT WS8125
	Machining parameter	Vc=220m/min , f=0.2mm/r , ap=1.5mm
	Result of cutting	Hardstone : 40~50pcs/cutting edge Brand T:30~40pcs/cutting edge

Housing intermittent / continuous roughing turning

	Workpiece	Cf53
	Machining way	Wet continuous/ intermittent semi-finish external turning
	Inserts	DNMG150408-MT WS8125
	Machining parameter	Vc=286m/min , f=0.33mm/r , ap=0.2mm
	Result of cutting	Hardstone : 46~63pcs/cutting edge Brand T:40~50pcs/cutting edge

Bearing turning

	Workpiece	Bearing Gcr15
	Machining way	Wet rough turning with facing B and external turning
	Inserts	WNMG080408-MT WS8125
	Machining parameter	Vc=260m/min , f=0.32mm/r , ap=2mm
	Result of cutting	Hardstone : 130~150pcs/cutting edge Brand T:130~150pcs/cutting edge

Bearing turning

	Workpiece	Bearing Gcr15
	Machining way	Wet rough turning with facing A and chamfer turning
	Inserts	WNMG080408-MT WS8125
	Machining parameter	Vc=369m/min , f=0.31mm/r , ap=1mm
	Result of cutting	Hardstone : 65~72pcs/cutting edge Brand T:60~70pcs/cutting edge

A1

Piston rod roughing turning

	Workpiece	27SiMn
	Machining way	Dry roughing turning
	Inserts	TNMG160408-R-M WS8125
	Machining parameter	Vc=100m/min , f=0.4mm/r , ap=2.5mm
	Result of cutting	Hardstone : 50~60pcs/cutting edge Brand Z : its fail when machining cause vibration is too large.

Spherical shells hole turning

	Workpiece	Steel 45#
	Machining way	Wet continuous semi-finishing turning
	Inserts	CCMT09T308-TM WS8115
	Machining parameter	Vc=238m/min , f=0.14~0.26mm/r , ap=1mm
	Result of cutting	Hardstone : 882~908pcs/cutting edge Brand T:600~850pcs/cutting edge

Features of turning inserts machining stainless steel

- ♦ The special design chipbreaker has excellent performance of stainless steel for rough machining, semi-finishing machining and finishing machining.
- ♦ BF-chipbreaker inserts are used for semi-finishing machining and finishing good surface. The specific chipbreaker solved the burr phenomenon on the parts surface.
- ♦ BM-chipbreaker inserts are the first choice for stainless steel common machining, the cutting tools with both sharpness and hardness, which suitable use to semi-finishing and rough turning.
- ♦ Well-solved the difficulty of the stainless steel hard chip breaking, sticking, surface hardening etc, thus obtain the high quality surface..
- ♦ Special chipbreaker can control the chipping direction, thus raises the production efficiency and reduce the built-up edge occur.
- ♦ There are different cutting edge designs for rough machining, semi-finishing machining and finishing machining. The inserts for finishing and semi-finishing are emphasize the sharpness of cutting edge. To optimize the cutting edge for rough machining inserts, well balanced the safety and sharpness, improved service efficiency of tool.

Features of chip-breaker

BF

- ♦ Chipbreaker for finishing machining and semi-finishing machining.
- ♦ The sharp cutting edge with smaller cutting resistance.
- ♦ It has good chipping processing power even machining small cutting depth.
- ♦ The special treatment for the cutting edge can reduce the production of built-up edge.

BM

- ♦ Chipbreaker for semi-finishing machining and rough machining.
- ♦ The combination of sharpness and hardness for cutting edge, which can achieved wider range of machining.
- ♦ Good chipping removal performance with lower cutting resistance.

BR

- ♦ Improved chip breaking lug boss.
- ♦ Well-proportioned cutting edge passivation
- ♦ The solid cutting edge is suitable for rough and intermittent turning.
- ♦ The large space for chipping can easy handle rough and high feed rates machining.

Application Case

Flange finishing turning

Workpiece	Stainless steel SUS304
Machining way	Continuous external finishing turning
Inserts	WNMG080408-BF WS7125
Machining parameter	Vc=220m/min , f=0.14mm/r , ap=0.1mm (Ra≤0.8)
Result of cutting	Surface roughness: lower than Ra1.6 Hardstone, 242 pieces / cutting edge Brand C: 212 pieces /cutting edge

Flange finishing turning

Workpiece	Stainless steel SUS304
Machining way	Continuous external finishing turning
Inserts	WNMG080408-BF WS7125
Machining parameter	Vc=210m/min , f=0.1mm/r , ap=0.1mm (Ra≤0.8)
Result of cutting	Surface roughness: lower than Ra1.6 Hardstone, 740 pieces / cutting edge Brand Z: 450 pieces /cutting edge

Flange roughing turning

Workpiece	Stainless steel SUS201
Machining way	The continuous turning for end face and excircle
Inserts	WNMG080408-BM WS7125
Machining parameter	Vc=273m/min , f=0.3mm/r , ap=1.0mm
Result of cutting	Hardstone:37~42pcs/cutting edge Brand M:38~42pcs/cuttting edge

The Explanation of Grooving and Parting

Features of grooving inserts

- A type of general machining cutting insert with multifunction which can be used for grooving and turning.
- Improved 3D chipbreaker achieved effective control of grooving. Maximum decrease the cutting resistance and machining vibration.
- High toughness cutting edge reduce the chipping possibility of cutting nose at unstable machining conditions. Suitable for interrupted cut and vibration machining.
- The combination of wear-resistance and toughness that improved the service life and machining reliability.

Features of chip-breaker

Chip-breaker M:Satisfied cutting, grooving, turning and other processing needs, the cutting process becomes light, chip more smooth, to achieve the ideal processing surface quality.

Chip-breaker G:mainly used for cutting applications.Special chip-breaker design makes cutting narrow and improves cutting flow control.

Chip-breaker T:The special back face structure reduces the cutting resistance by 20 % , reducing noise and shakes,improving the quality of face.The special cutting edge design makes the chip breaking effect better , it can machining by transverse section.

Grooving and Parting Insert

Application Case

Grooving seal groove end face

	Workpiece	stainless steel SUS304
	Machining way	Continuous turning end face
	Inserts	QCMB3004-T WS7125
	Machining parameter	Vc=130m/min , f=0.05mm/r
	Result of cutting	Hardstone: 1300 pieces /cutting edge Brand C : 1100 pieces/ cutting edge

Grooving flange end face

	Workpiece	Stainless steel SUS304
	Machining way	Continuous turning end face
	Inserts	QCMB4004-M WS7125
	Machining parameter	Vc=147.2m/min , f=0.04mm/r
	Result of cutting	Hardstone: 352 pieces/cutting edge Brand M : 218 pieces/cutting edge

A4

Grooving end turning

	Workpiece	Casting stainless steel
	Machining way	Continuous grooving, external turning
	Inserts	QCMB3004-M WS7125
	Machining parameter	Vc=120m/min , f=0.1mm/r
	Result of cutting	Hardstone : 11 pieces/cutting edge Brand C : 10 pieces/cutting edge

Features of threading inserts

- Pressed by high precision mould which ensure the high accuracy of tooth profiles and excellent quality of cutting edge.
- Strict measurement control which narrow the size difference between inserts and keep the consistency.
- Special process technique for cutting edge makes small circular nose treatment more professional and reasonable.
- The insert with chip breaker improves the capacity of iron processing, possessing the excellent processing stability.
- WS5125, the specially developed for threading inserts, ensuring effectively resistance of plastic deformation and abrasion in machining.

Processing mode of thread cutting inserts

Internal threading machining right thread	Internal threading machining left thread
External threading machining right thread	External threading machining left thread

Feed mode of thread cutting inserts

Radial in-feed

- Radial machining, the most common way of machining.
- The cutting edge is relative sharp with good toughness material, suitable for fine pitch thread cutting and meet the small cut deep machining requirement.
- Due to different workpiece being processed, the V-type chip is difficult to control in machining.
- The longer the interface of cutting chips on left and right side, the heavier the cutting load produced. Thus more easier cause the vibration.

Flank in-feed

- With more cutting depth, the cutting edge bear less pressure. Thus provide a stable working condition, recommended for coarse pitch thread cutting.
- Flank in-feed is conducive to chip discharging.
- The right side cutting edge is easy to wear, so it is easier to discharge in the same direction.

Improved flank in-feed

- The improved method of flank in-feed from the side along the cutting tooth.
- The consistency chip removal direction provides an easy way for discharging.
- Reduce the abrasion of right side flank, recommended for double-edged thread machining.
- The right side cutting edge also involved in a certain cutting depth, completely eradicate the phenomenon of zero cutting depth. More stable in cutting machining.

Alternation flank in-feed

- Alternation use of cutting edge which well distribute the wear for left and right side' s flank, extending the tool' s life.
- Chips are flowing from both of right and left, good chips removal.
- Recommended for coarse pitch thread cutting.

Application cases

Valve rod internal thread turning

	Workpiece	Stainless steel SUS 304
	Machining way	Internal thread turning M20
	Inserts	16IR14W WS5125
	Machining parameter	Vc=75m/min, 走刀次数=12次
	Result of cutting	Hardstone : 460 pieces/cutting edge Brand Z : 390 pieces/cutting edge

Valve body internal thread turning

	Workpiece	Stainless steel 201
	Machining way	Internal thread turning M56
	Inserts	16IR11W WS5125
	Machining parameter	Vc=120m/min, 走刀次数=16次
	Result of cutting	Hardstone : 120 pieces/cutting edge Brand Z : 96 pieces/cutting edge

Pipe joint internal thread turning

Workpiece	Stainless steel SUS201
Machining way	Internal thread turning
Inserts	16IR11W WS5125
Machining parameter	Vc=93.3m/min, Cutting times: 17 times
Result of cutting	Comparison result of cutting 50 pcs parts: Hardstone: slight wear Brand Z: severe wear

Valve deck internal thread turning

A5

Workpiece	Stainless steel 201
Machining way	Internal thread turning M45
Inserts	16IR11W WS5125
Machining parameter	Vc=98.9m/min , cutting times:16 times,
Result of cutting	Comparison result of cutting 70 pcs parts: Hardstone : slight wear Brand Z: severe wear

Application Case Comparison No.1

Workpiece material : Stainless steel 201 Cutter bar : SNR2525K16

Inserts type : 16IR11W

Cutting parameters

n = 600r/min , cutting times:16 times, Vc=103m/min

Result of cutting

Hardstone A continuous machining 108 pieces , normal wear

Brand B continuous machining 98 pieces , slight chipping.

Application Case Comparison No.2

Workpiece material : Stainless steel 304 Cutter bar : SNR2020K16

Inserts type : 16IR14W

Cutting parameters

n = 900r/min , cutting times:11 times, Vc=85m/min

Result of cutting

Hardstone A continuous machining 440 pieces , normal wear

Brand B continuous machining 310 pieces , severe wear

The Explanation Of Grade

Grade	Coating Strucuture					Application	ISO	Wear Resistance  Toughness											
	Coating Way	Coating Color	Pictures	Component	Range			01	05	10	15	20	25	30	35	40	45		
WS5130	PVD	Gray Black		AlTiN	Thin	It is suitable for the general milling of steel, stainless steel, cast iron and other materials, especially in the range of steel HRC30-50.	P20~P35 M20~M35 K20~K35												
WS7130	PVD	Gray		AlCrN	Thin	It is the firstly grade of stainless steel for milling. With different chipbreaker types, it can meet the requirements of roughing and finishing milling of all kinds of stainless steel and titanium alloys, and has good stability and safety.	P35~P45 M35~M45												
WS7140	CVD	gold -yellow		TiN+MT-TiCN+Al2O3+TiN	Thick-	It is a medium and low speed of heavy milling for stainless steel and steel.	P35~P45 M35~M45												
WS8130	PVD	Gray Black		AlTiN	Thin	It is a general machining for heavy milling of steel.	P25~P35 M25~M35												
WS5131	PVD	gold -yellow		AlTiN+TiN	Thin

Overview

● Inserts for square shoulder milling

● Inserts for face milling 45°

● Inserts for profile milling

● Inserts for face milling 75°

● Inserts for high feed milling

Milling inserts' Features

- ◆ Design with double clearance angle and special treatment on its cutting edge and tool nose. High dimensional accuracy, fine and smooth surface.
- ◆ Using fine cemented carbide substrate with unique process and excellent coating, which achieved the combination of hardness, toughness and higher red hardness.
- ◆ According to the different hardness of mould workpiece, evaluate the service life of cutting tools accurately. In this way, automatic and unmanned processing is realized and raises the production efficiency.
- ◆ Suitable for processing of face milling, shoulder milling, cavity milling, ramp machining, profile milling, etc.
- ◆ Well solved the difficulty of tools selection and replacement, thus reducing tools inventory costs.
- ◆ Versatility, good stability, long service life, high cost-effective. machining, profile milling, etc.

Milling inserts for Aluminium

90° SE□□With Hole

[illegible]

Brief introduction of main workpiece materials

- ◆ C45W commonly known as 45 # steel, Hong Kong named it ace steel. Hardness is range from HB170 to HB220. Has widely application, and the price is relatively cheap.
- ◆ Germany ' 40CrMnMo7 is used as pre-hardened plastic mould steel, hardness range from HRC28 to HRC40. Its advantage is higher hardness than medium carbon steel and more stable on deformation.
- ◆ US grade P20 belongs to plastic mould steel, Called 3Cr2Mo in China. This grade steel has uniform hardness range from HRC30 to HRC42, with good polishing and light etching performance, which suitable for large and medium-sized precision moulds matching with large die-set. This steel has good machine ability and widely used in plastic moulds.
- ◆ Pre-hardened plastic mould steel NAK80, delivery hardness from HRC37 to HRC43. Has a good polish and carve ability, good discharge performance, and commonly used in mirror polishing mould.
- ◆ 4Cr5MoSiV1, American-standard is H13. Before the heat treatment, hardness range from HRC15 to HRC 20, has excellent high-temperature strength, wear resistance, toughness and other comprehensive mechanical properties. Good harden ability, small thermal deformation, and easy for processing, which is suitable for larger size, complex shape mould. Widely used in aluminum, zinc die-casting mould applications.
- ◆ The varieties of 718S, 738H, 745H, Nak5, etc. have just accounted for about 15% to 20% in mould applications. The processing of these kinds is more difficult to machining than 45 # steel which mainly for the mould core and cavity .

Application Case Comparison No.1

Workpiece material : steel 45#

Material hardness : HB200 Holder : φ63x6t

Inserts type : APMT1605PDER-FM

Cutting parameters

S=800rpm f=4800mmpm ap=0.5mm ae=45mm

Result of cutting

Hardstone A processing for 400mins , normal wear

without breakage. Foreign B processing for

370mins , slight chipping.

Application Case Comparison No.2

Workpiece material : P20

Material hardness : HRC30

Holder : $\varnothing 20 \times 2t$

Inserts type : APMT1135PDER-FM

Cutting parameters

S=2200rpm f=2500mmrpm ap=0.27mm

Result of cutting

Hardstone A processing for 150mins, normal wear

on flank and rake surface.Foreign B processing

for 130mins, cutting edge slight chipping.

Application Cases

45# steel cavity milling

	Workpiece	Steel 45#
	Machining way	D50-Z4-L125 overhang BT40 dry rough cavity milling
	Inserts	RPMT1003MO-FM WS5130
	Machining parameter	Vc=180m/min , fz=0.8mm/z , ap=0.4mm ae=32mm
	Result of cutting	Hardstone : 240min/cutting edge,normal wear, Foreign brand M : 210min/cutting edge,slight chipping.

718H rough milling

	Workpiece	Plastic bulbs female mould pre-hardened steel 718H (HRC38~42)
	Machining way	D17-Z2-L65 overhang BT40 dry rough milling ball socket
	Inserts	APMT1135PDER-FM WS5130
	Machining parameter	Vc=160m/min , fz=0.8mm/z , ap=0.25mm ae=10mm
	Result of cutting	Hardstone : 91min/cutting edge,normal wear , Foreign brand D : 80min/cutting edge,normal wear.

738H Rough Milling

	Workpiece	738H rough milling
	Machining way	D35-Z3-L80 overhang BT40 rough milling
	Inserts	RPMT1003MO-FM WS5130
	Machining parameter	Vc=165m/min , fz=0.67mm/z , ap=0.3mm ae=22mm
	Result of cutting	Handstone : 164 min/cutting edge, normal wear Brand D : 95 min/cutting edge, normal wear

738H clean-up machining

Workpiece	pre-hardened steel 718H (HRC38~42)
Machining way	D16-Z2-L65 overhang BT40 dry clean-up machining
Inserts	APMT1135PDER-FM WS5130
Machining parameter	Vc=150m/min , fz=0.4mm/z , ap=0.25mm ae=10mm
Result of cutting	Hardstone : 240+min/cutting edge with normal wear.

NAK80 Rough Milling

	Workpiece	High polished pre-hardened steel NAK80 (HRC38~42)
	Machining way	D16-Z2-L60 overhang BT40 dry rough face milling
	Inserts	APMT1135PDER-FM WS5130
	Machining parameter	Vc=125m/min , fz=0.4mm/z , ap=0.25mm ae=12mm
	Result of cutting	Hardstone : 46min/cutting edge,normal wear , Foreign brand D : 38min/cutting edge,normal wear.

H13 Aluminium Extrusion Mould

	Workpiece	Aluminium Extrusion Mould H13
	Machining way	D16-Z2-L104 overhang BT40 dry rough milling hole
	Inserts	APMT1135PDER-FM WS5130
	Machining parameter	Vc=177m/min , fz=0.55mm/z , ap=0.28mm ae=16mm
	Result of cutting	Hardstone : 50min/cutting edge,normal wear, Foreign brand D : 48min/cutting edge,normal wear.

H13 Hardened Steel Die-casting Mould

	Workpiece	Die-casting Mould H13 Hardened Steel (HRC48~51)
	Machining way	D21-Z2-L60 overhang BT40 dry rough face milling
	Inserts	APMT1135PDER-FM WS5130
	Machining parameter	Vc=148m/min , fz=0.44mm/z , ap=0.2mm ae=13mm
	Result of cutting	Hardstone : 17min/cutting edge,abrasion and chipping , Foreignbrand D : 11min/cutting edge,heavily worn.

S136 Corrosion-resistant Mould Steel Rough Milling

Workpiece	S136 corrosion-resistant mould steel
Machining way	D17-Z2-L70 overhang BT40 dry rough face milling
Inserts	APMT1135PDER-FM WS5130
Machining parameter	Vc=160m/min , fz=0.6mm/z , ap=0.25mm ae=10mm
Result of cutting	Hardstone : 287min/cutting edge,normal wear.

S136 Hardened Steel Rough Milling

Workpiece	S136 Hardened Steel Mould (HRC48)	
Machining way	D17-Z2-L65 Overhang BT40 dry Rough Milling	
Inserts	APMT1135PDER-FM WS5130	
Machining parameter	Vc=128m/min , fz=0.38mm/z , ap=0.2mm ae=0.5~10mm	
Result of cutting	Hradstone : 74Min/Cutting Edge,normal Wear.	

Cr12 Punch Mould Hole-Milling

Workpiece	Cr12 Punch Mould
Machining way	D30-Z2-L75 Overhang BT40 Dry Rough Hole-Milling
Inserts	RPMT1003MO-FM WS5130
Machining parameter	Vc=170m/min , fz=0.89mm/z , ap=0.3mm
Result of cutting	Comparision under 58min/cutting edge,WS5130 slight chipping , While foreign brand D heavily worn

Application Case

Cylinder stator

Workpiece	Turbine cylinder 15Cr1MoV
Machining way	Face and side milling with dry
Inserts	CNEF161406-408(CNE454) WS8130
Machining parameter	$V_c=120\text{m/min}$, $f=0.2\text{mm/z}$, $a_p=20\text{mm}$, $a_e=140\text{mm}$
Result of cutting	Hardstone :160min/cutting edge Brand i:150-180min/cutting edge

Crankshaft milling

Workpiece	42CrMo
Machining way	Rough milling for shaft
Inserts	XNER11C10A0A/XNER14E0904/XNER14E10A06A WS8130
Machining parameter	$V_c=202\text{m/min}$, $f_z=0.12\text{mm/z}$, $a_p=1.5\sim 2.5\text{mm}$
Result of cutting	Hardstone:1100pcs/cutting edge Brand K:1000pcs/cutting edge

Switch rail

Workpiece	U75V
Machining way	Rough milling for wing rail
Inserts	LNEN151207-400(N18-1) WS8130
Machining parameter	$V_c=180\text{m/min}$, $f_z=0.2\text{mm/z}$, $a_e=20\text{mm}$, $a_p=50\text{mm}$
Result of cutting	Hardstone:15m/cutting edge Brand Z:10m/cutting edge

External gear

Workpiece	50Mn
Machining way	Rough milling for gear with dry
Inserts	LNEF191405-2R35M23-16 WS8130
Machining parameter	$V_c=113\text{m/min}$, $f_z=0.12\text{mm/z}$, $a_p=12\text{mm}$
Result of cutting	Hardstone:460m/set Brand S:300m/set

Drilling Insert

- ◆ Feature C-02
- ◆ Series C-03 — 04
- ◆ Application Case C-05 — 06

Drilling Inserts

Features of the inserts

- ◆ Using the same types of inserts at the center and in the surrounding of drilling inserts, which is more easier for inserts replacement.
- ◆ With sharp cutting edge, reducing the vibration of machining process , which is beneficial to the insert surface with low roughness
- ◆ Optimized chipbreaker structure improve the cutting performance and chipping control, contributing to easy and fast cutting.
- ◆ The combination of specific substrate and coating, well balanced the different wear patterns of center inserts and surrounding inserts.

Application cases

Condensing plate drilling

	Workpiece	Stainless steel 304
	Machining way	Inter-cooled drilling D23.5
	Inserts	SPMG07T308DG WS5131
	Machining parameter	Vc=140m/min , fn=0.10mm/z ,
	Result of cutting	Hardstone : 3.0 M/cutting edge Brand A : 2.5~3.0 M/ cutting edge

Flange end face drilling

	Workpiece	Stainless steel SUS 304
	Machining way	Deep hole D14.5 25 depth
	Inserts	SPMG050204 WS5131
	Machining parameter	Vc=159.4m/min , f=0.034mm/r (≤Ra1.6)
	Result of cutting	Hardstone : 240 hole/cutting edge Brand D : 200 hole/ cutting edge

Bevel Gear Drilling

	Workpiece	Forge 20CrMnTi
	Machining way	Drilling with Coolant D58
	Inserts	WCMX080412 WS5131
	Machining parameter	Vc=143.9m/min , f=0.089mm/r
	Result of cutting	Hardstone : 180hole/cutting edge Brand S:150hole/cutting edge

Coupling Drilling

	Workpiece	40Cr
	Machining way	External coolant double-headed drill D54
	Inserts	WCMX0080412 WS5131
	Machining parameter	Vc=76.3m/min , f=0.133mm/r
	Result of cutting	Hardstone : 60hole/cutting edge Brand T:50hole/cutting edge

General Technical Data

- ◆ Relevant Information Of Cemented Carbide --- D-02 — 08
- ◆ Relevant Information Of Workpiece ----- D-09 — 16
- ◆ Other Technical Information --- D-17 — 22

General Technical Data

Cemented Carbide Products Safety Standard

1. Safety responsibilities

Before using our products, please provide necessary safety training for operators, and carefully read the 'NOTE' and 'CAUTION' contents on the product package. We are not liable for any responsibility caused by not complying with the request for operation.

2. Features of cemented carbide materials

Cemented carbide cutting tools are mainly composed of W, C, Co, N, Ti, Si, Al, O, etc elements and their chemical compound, and come into shape after sintering and a series of subsequent machining. Cemented carbide tool has good chemical stability, high strength and very good wear resistance. It is the ideal tool to cut most metals and high-strength nonmetals.

3. Cautions for safely using cemented carbide tools

- 1) Cemented carbide cutting tools are hard and frangible material, liable to brittle rupture and breakage due to larger force or partial stress, cutting tools have sharp edge.
- 2) In the cutting process, it is unavoidable to generate chips and brittle discs, etc. Please make sure necessary labor protection articles are prepared before machining.
- 3) Most cemented carbide is mainly composed of W and Co with high density. In the process of transport and storage, it should be treated as great heavy object and be handled with care.
- 4) Cemented carbide tools should be stored in dry environment, away from corrosive atmosphere.
- 5) Cemented carbide and steel have different thermal expansion coefficients. To avoid breakage caused by concentrated stress, welding should be conducted under suitable temperature.
- 6) For longer life of machine tool and cutting tools, Coolant is needed in the cutting process, please select correct coolant to prolong machine and tool life.
- 7) If cracks are generated in the machining process, please stop using the tool.
- 8) Long use of cemented carbide tool will lead to cutting edge passivation and lower strength. Please make sure it is reground by professionals.
- 9) Please collect the broken tools and chips properly to avoid injury to other people.

Cautions for safety using cutting tools

Danger	Protective measure
During rotary cutting, clothes, gloves, etc. are easily to get wringed in the machine at high speed, thus cause casualties.	The operator should not wear gloves during rotary cutting.
	Please put your long hair in the working cap.
	Please pay attention that the clothes should not contact the operational parts of machine.
Improper use of tools may cause tool breakage and expulsion from machine, causing injuries.	Please read catalogue and safety standard before operating.
	Please wear safeguard glasses and protective clothes.
Direct contact with the sharp cutting edges may cause injuries.	Please use labor protection articles such as gloves when assembling or disassembling cutting tools on machine.
In the cutting process, hot chips may cause scald and scratch on operator.	Please use tools such as pliers to clear away the chips in time.
	Please wear safeguard glasses , protective gloves and clothes.
Burrs on workpiece are very sharp and likely to cause injuries.	Do not touch the burrs on the workpiece with bare hand.
	Please wear protective gloves and clothes.
Machining workpiece held infirmly will cause tool breakage and spatter of workpiece.	Make sure the workpiece is clamped firmly.
	Please wear safeguard glasses, protective gloves and clothes.
If inserts or spare parts are not clamped properly, they may become loose and fly off, causing risk of injuries.	Make sure the inserts and spare parts are clamped firmly before machining.
During cutting at high speed,the chips flying off rapidly may cause injuries.	Safeguard articles such as protective cover, screen, etc. should be used.
	Please wear safeguard glasses, protective clothes and gloves.
Inserts or spare parts may fly off due to inertial centrifugal force at high cutting speed.	Use the tools within recommended cutting conditions.
	Please wear safeguard glasses and protective clothes.
Milling cutters have sharp cutting edges and direct contact with them may cause injuries.	For your safety, please wear protective gloves if you need to touch inserts.
Rapid increase of cutting resistance due to excessive abrasion and severe impact may lead to breakage of tool and spatter of chips, thus cause injuries to operator.	Change the tool with excessive abrasion without delay.
	Please wear safeguard glasses and protective clothes.
In cutting process, sparks and hot chips may cause fire and explosion hazard.	Clear away the Inflammable and explosive materials in the cutting area.
	Please make sure the fire extinguishers are ready for use.
At high speed, the machine will vibrate severely because of poor balance of holder, causing tool breakage.	Check whether the machine is loose or has any abnormal noise before cutting.
	Please wear safeguard glasses and protective clothes.
If Inserts and tool are clamped too tightly with screw and clamp, they face the risk of breakage and spatter.	Please do not clamp tools too tightly with bushing.
Off-center or poor balance of tools in rotating machining will cause vibration, breakage and splash of tool, thus will cause injuries.	Please use the tools within the range of recommended rotating speed.
	Check and adjust machine balance periodically.
Using the extremely small drill is likely to cause tool breakage and spatter, and it would be hard to take out the broken part.	Reduce tool vibration and conduct machining at suitable speed.
	Please wear safeguard glasses, protective clothes and gloves.
Machine and tools may be damaged if they are used beside the range of specified purposes, thus may cause other risks	Please use them strictly according to instructions and specified purposes.
Note: We are not responsible for any accidents caused by private modified tools without our permission.

Note :1.If the basic dimension > 500mm, the tolerance from IT1 to IT5 is on trial.
2.If the basic dimension ≤ or = 1mm, the tolerance from IT4 to IT18 are invalid.

The shaft lower deviation(ei) and upper deviation(es) can be obtained by basic tolerance and standard tolerance(IT) of shaft.

The hole lower deviation(EI) and upper deviation(ES) can be obtained by basic tolerance and standard tolerance(IT) of hole.

For example: for a hole with diameter 3mm, and tolerance H7, we can find that the lower deviation EI=0, in relation to H7 from the basic tolerance table, and the standard tolerance IT=10μm corresponding to H7, thus the upper deviation ES=EI+IT=10μm. Therefore the hole fitting dimension is $\varnothing 3_0^{+0.01}$ mm.

Note: 1. If basic dimension ≤1mm, the basic deviation a and b are not adopted.
2. Within the range from js7 to js11, if the value of ITn is odd number,
then the final deviation=± $\frac{ITn-1}{2}$

In the formula Deviation = ± $\frac{ITn}{2}$, ITn is the IT value corresponding to 'n'.
